

1. Write the vertex form of a quadratic equation.
2. What does changing the "a" variable do to the graph of a quadratic?
3. Being specific, name 3 ways that a parabola changes with different types of "a" values.
4. What does changing the "h" variable do to the graph of a quadratic?
5. If "h" is positive how does the parabola move? If negative?
6. What does changing the "k" variable do to the graph of a quadratic?
7. If "k" is positive how does the parabola move? If negative?
8. What conclusion can you make about the variables of h and k together?

Write the quadratic equation, in vertex form for each graph.

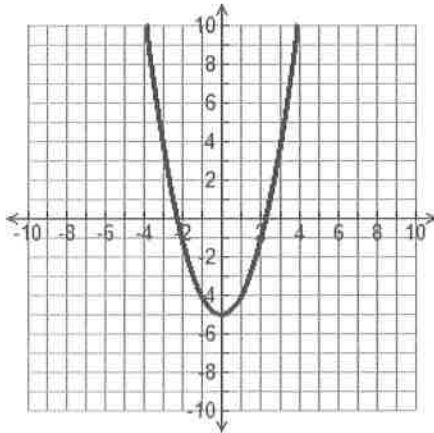

1.

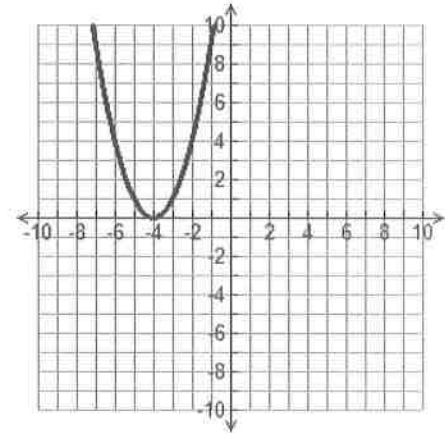

2.

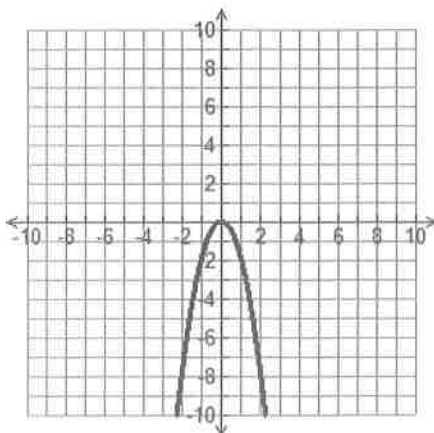

3.

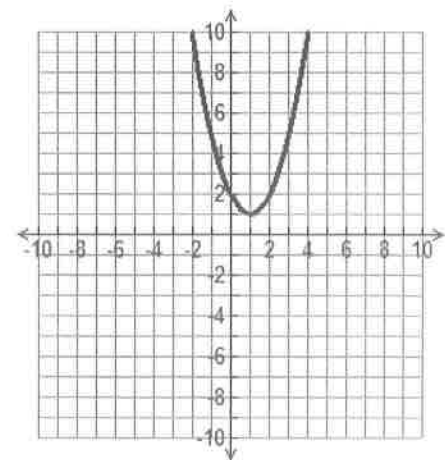

4.

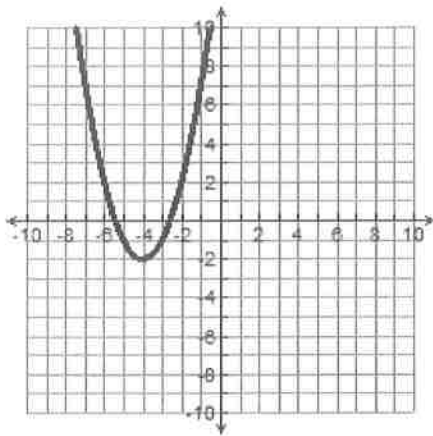

5.

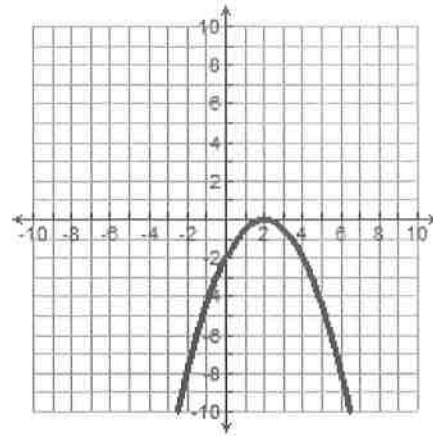

6.

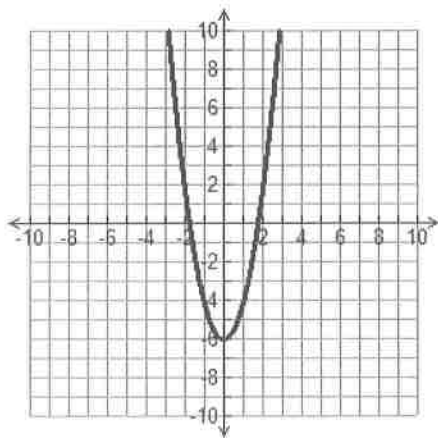

7.

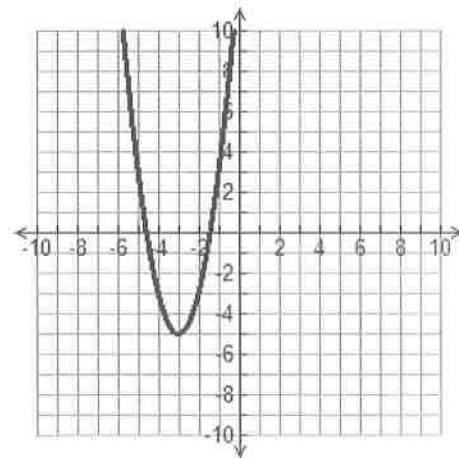

8.

9.

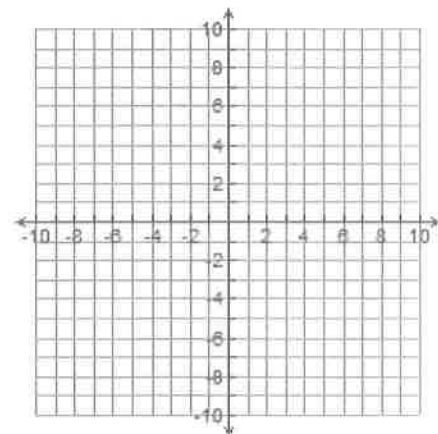

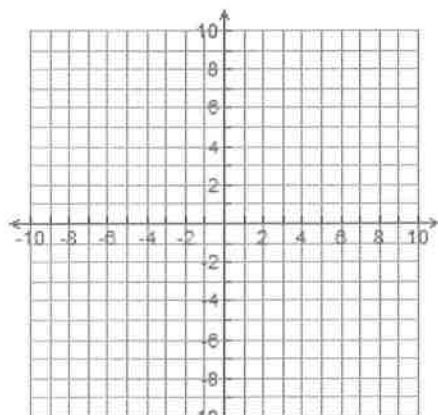

10.

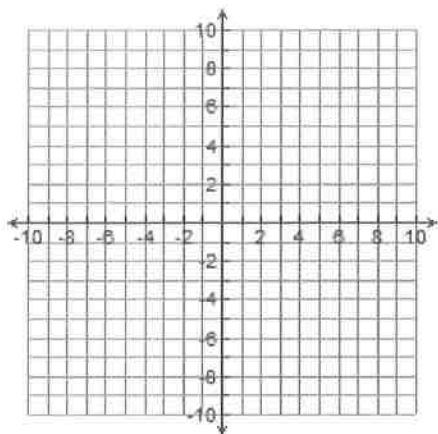

Graph the quadratic equation on the provided grid.

11. $f(x) = (x - 0)^2 + 3$

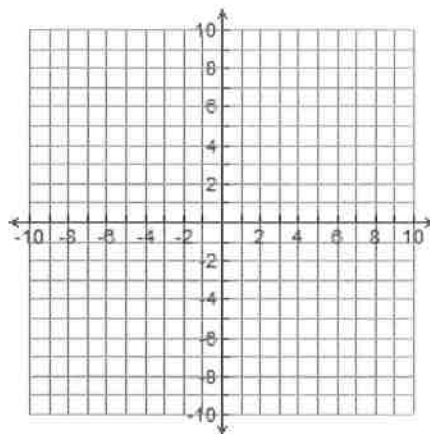

12. $f(x) = (x + 4)^2 + 0$

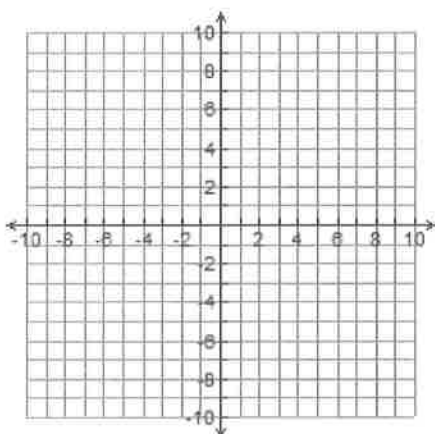

13. $f(x) = -2(x-0)^2 + 0$

14. $f(x) = (x-3)^2 + 4$

15. $f(x) = 3(x-4)^2 - 6$

16. $f(x) = \frac{1}{2}(x+2)^2 + 3$
